1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crockett '413 (Crockett) in view of Bates.

Crockett discloses the invention substantially as claimed. Crockett discloses a welding flux comprising:

a metal oxide (col. 10, line 33); and
a binder component.

Crockett further discloses wherein the binder component comprises:

silicon dioxide; and

additional binder components, including potassium silicate and/or sodium silicate (col. 7, lines 1-2).

Crockett further discloses wherein the silicon dioxide includes a nano scale powder including particles sizes included in the claimed range (col. 6, lines 4-27), establishing a prima facie case of obviousness.

However, Crockett is silent as to amounts of potassium silicate and sodium silicate in the binder.

Bates teaches to add potassium silicate and sodium silicate in amounts which result in ratios that overlap those as claimed by Applicant in the same field of endeavor for the purpose of providing a binder resulting in low residual weld porosity, establishing a prima facie case of obviousness.

It would have been obvious to one having ordinary skill in the art at the time of the invention to add potassium silicate and sodium silicate in amounts which overlap those as claimed by Applicant in order to form welds of low final porosity.
